

# Datacenter Efficiency/Emissions Measured, not Guessed!

Babak Falsafi

SWISS DATACENTER EFFICIENCY ASSOCIATION

[SDEA \(sdea.ch\)](http://sdea.ch)

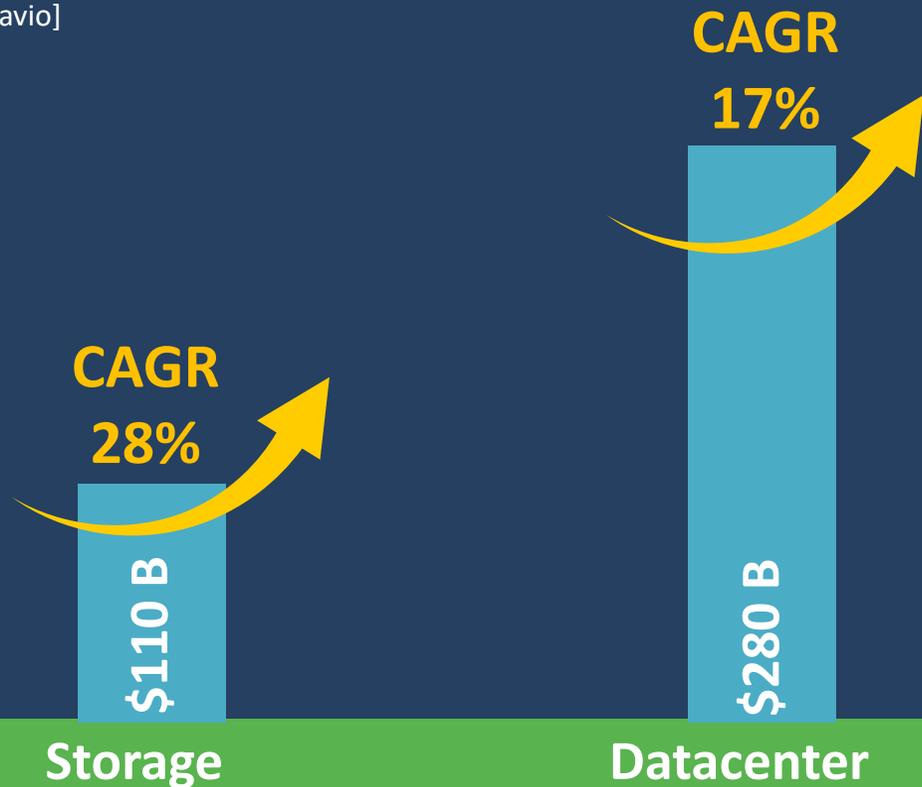

# Datacenters are...

the backbone of a digital economy

## Market Growth 2018-2023

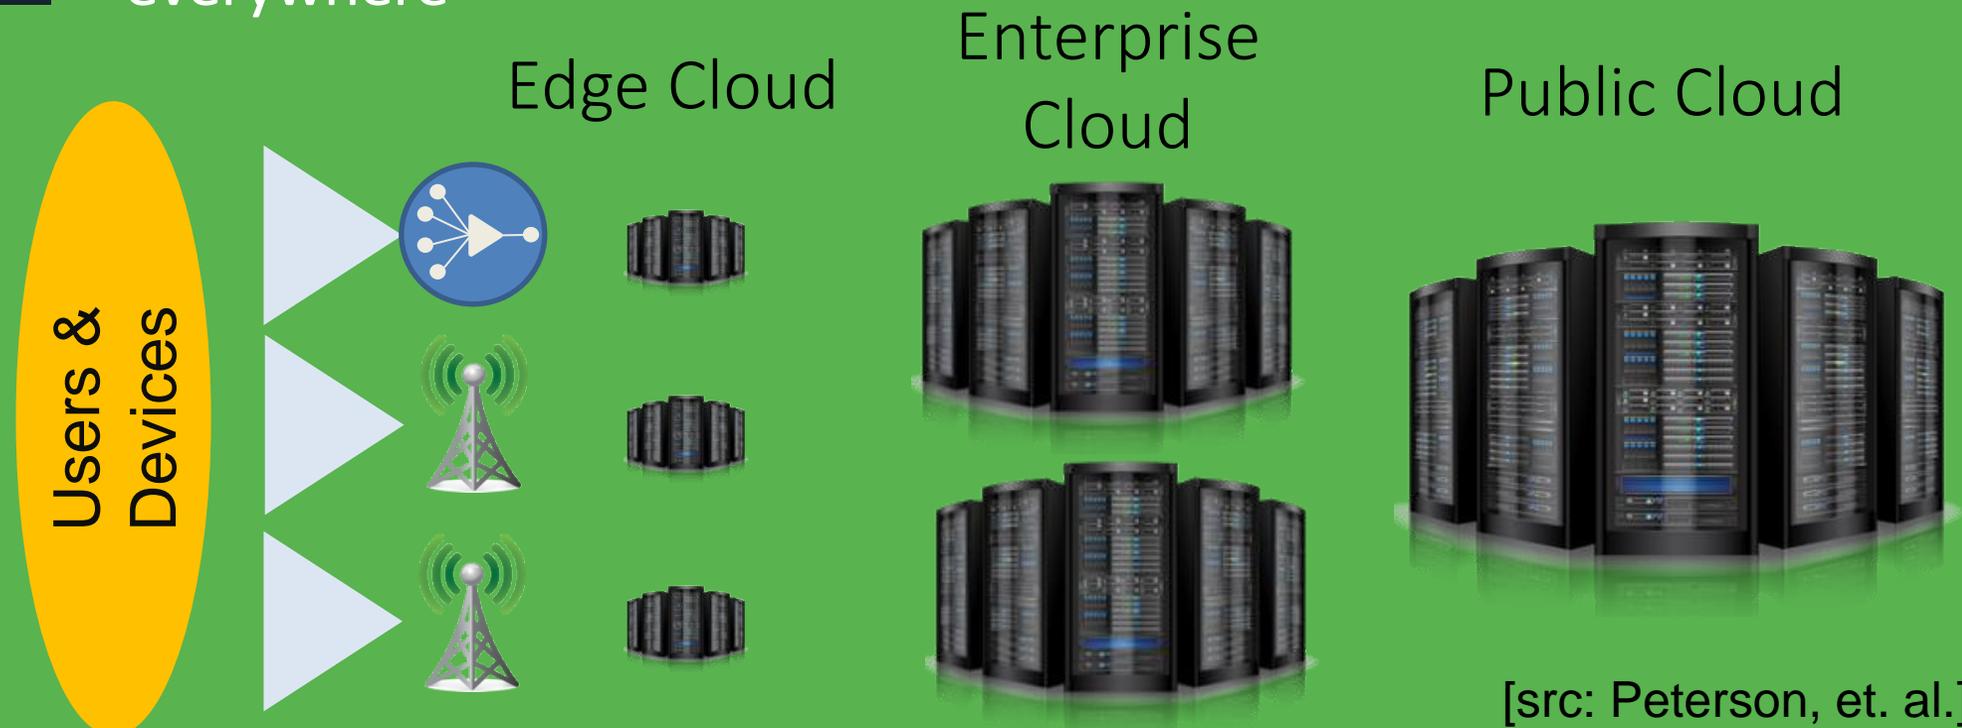

[Technavio]

## Centralized IT services

- Collection of servers to store, analyze & communicate data
- Host data-oriented services
- Commodity parts to lower cost
- Multitenancy to maximize return on investment

# Datacenters are... everywhere

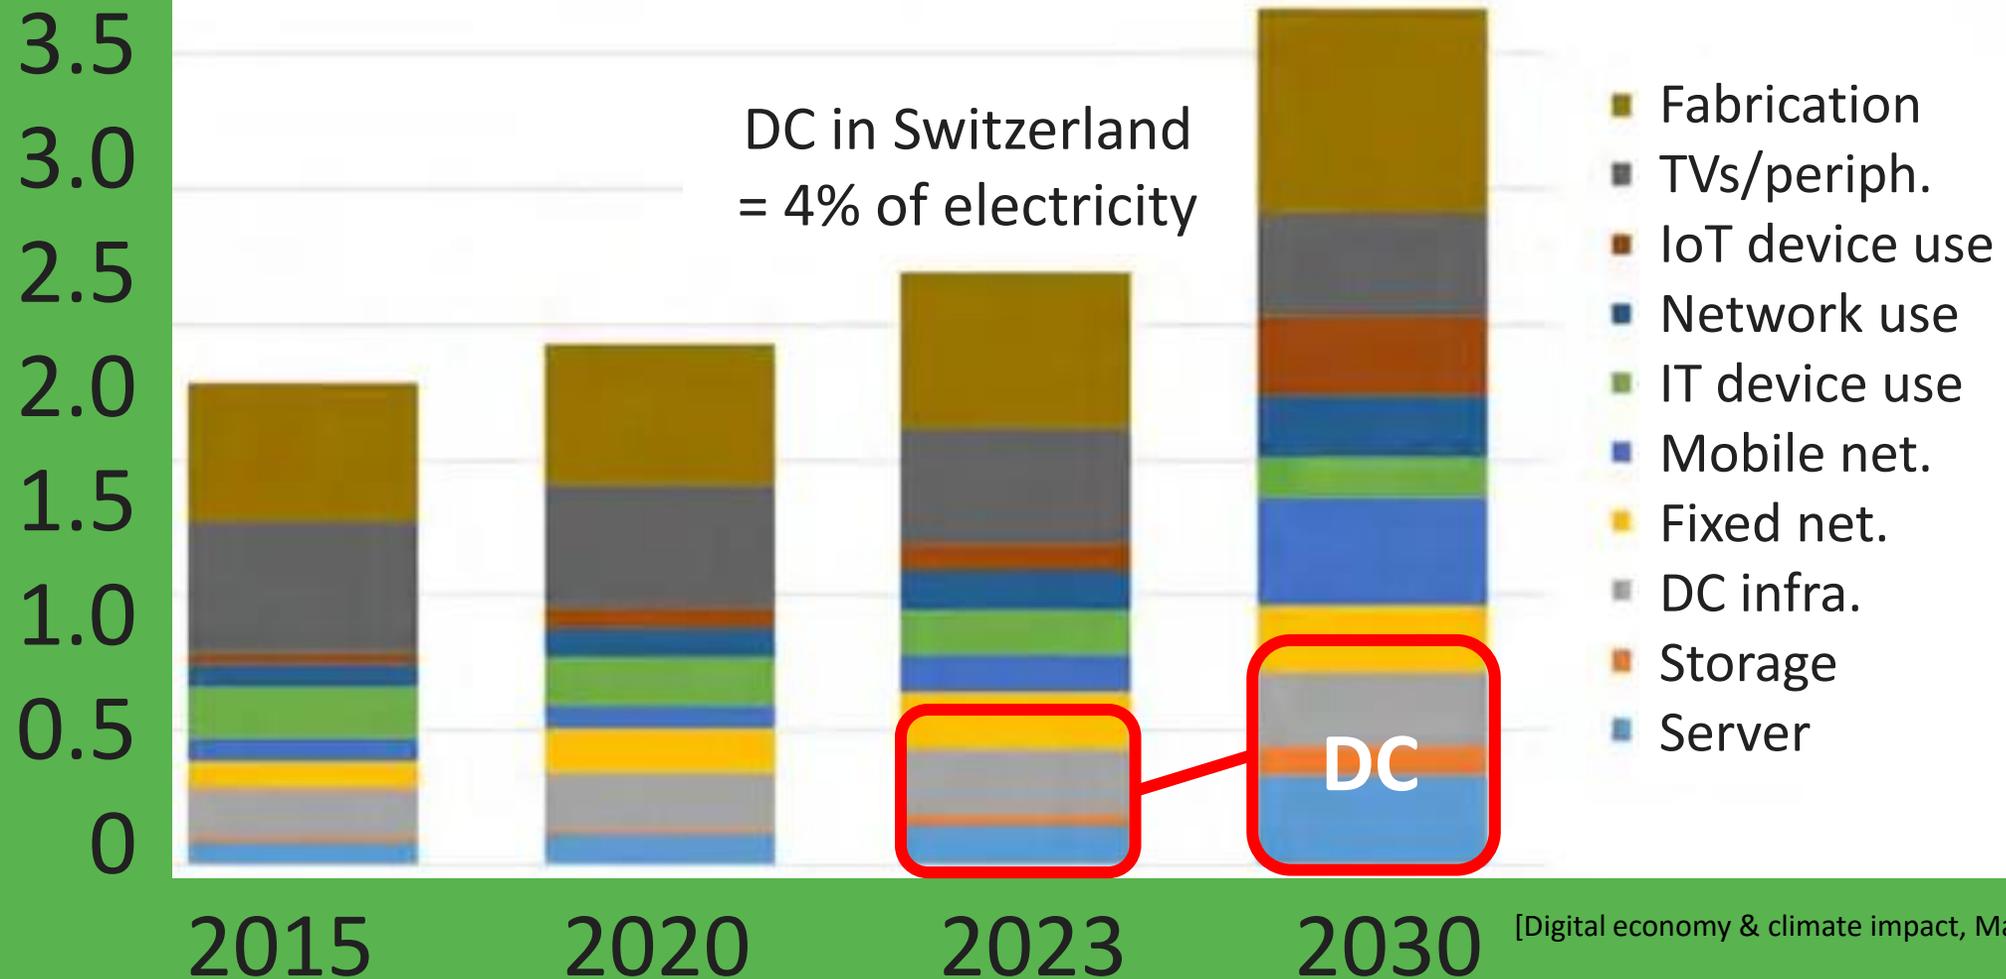

[src: Peterson, et. al.]

← Fast Decision Making/  
Digital Sovereignty

Long-term Analytics  
Global Data →

# Datacenters are... energy hogs (in 1000 TWh)

Life Is On

[Digital economy & climate impact, May 2022]

# Datacenters are...

boosted by trends

## Proliferation of AI

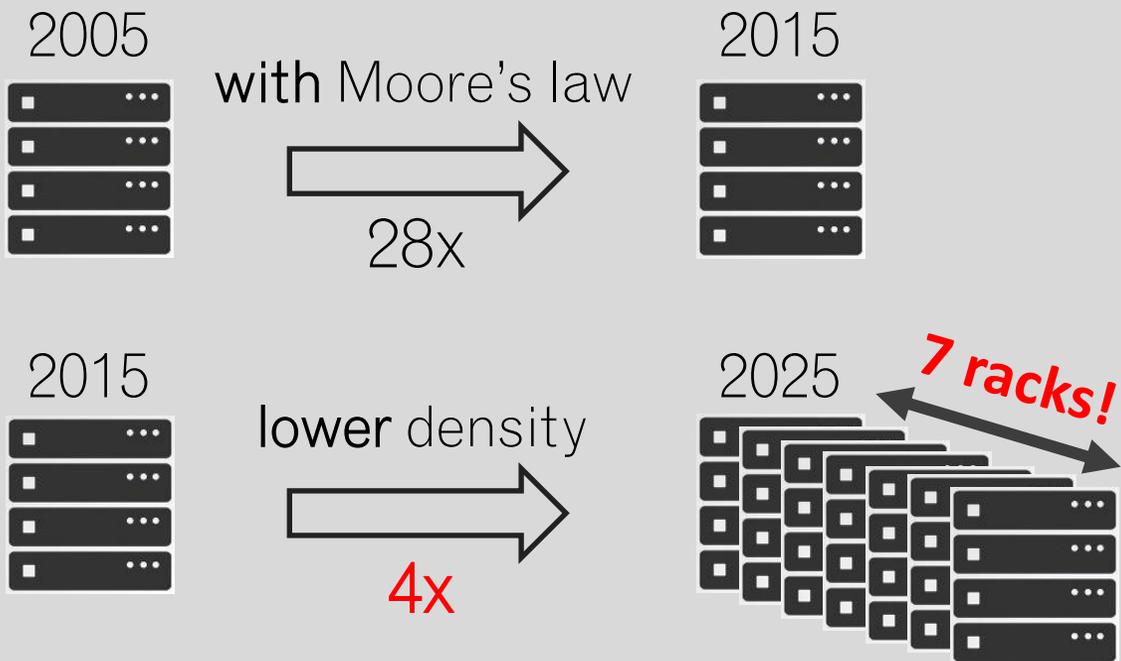

- Compute density growth 6x/year [MIT Technology Review]

## Arrival of Edge Clouds

- IoT streaming data over 5G
- Growth at 41% CAGR

# Datacenters are... not getting denser

## Datacenter density evolution

## End of Moore's Law (of Silicon)

- Five decades of doubling density
- Recent slowdown in density
- Silicon is at limits of physics

## Growth means building more

- 28x faster in ten years w/ Moore
- With lower density, 7x more DCs

# What is datacenter efficiency?

## relevant metrics

A datacenter is a physical facility housing a network of servers to host data with applications and services centered around data

### energy efficiency

compute, communicate, store and host with less electricity

### heat recovery

recover energy from the dissipated datacenter heat

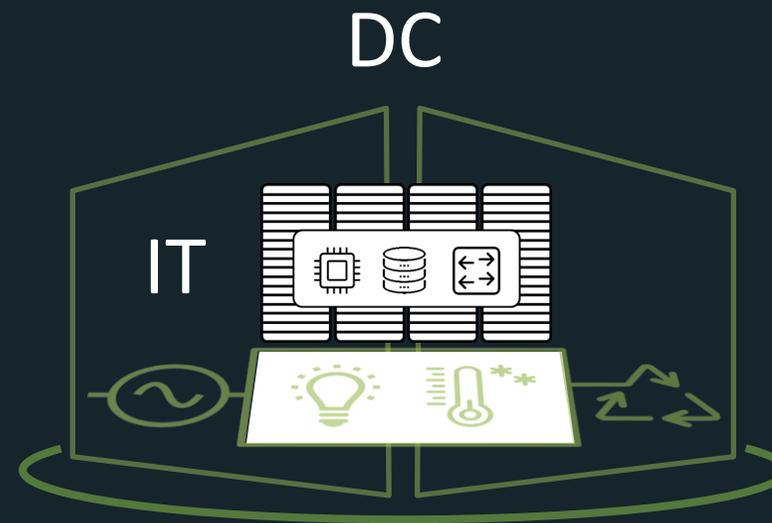

### renewable energy

use sources of renewable energy as electricity

# Today's efficiency metric

power usage efficiency

$$\text{PUE} = \frac{\text{Total DC Power}}{\text{IT Power}}$$

PUE has been around for two decades

# What is wrong with PUE?

irrelevant for new DCs

## IT Efficiency

Inefficient servers make PUE look good

## Full-stack DC efficiency

We are building DCs with PUE of  $< 1.2$

$>80\%$  of electricity goes to IT (how **efficient** is your IT?)

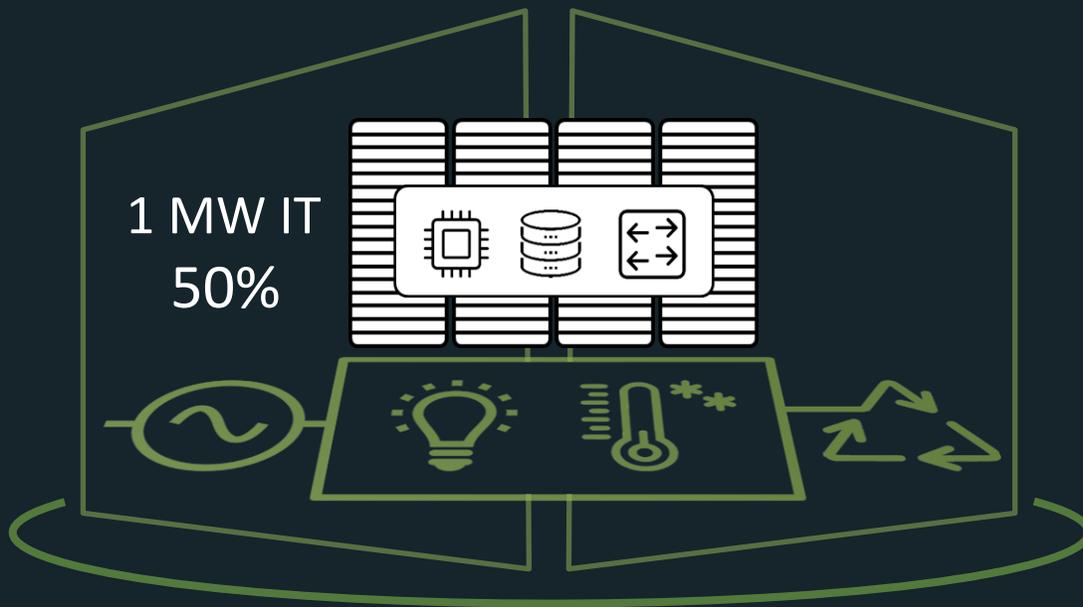

## End-to-end energy flow

Does not capture end-to-end energy (heat recycling, renewables)

# What is wrong with PUE?

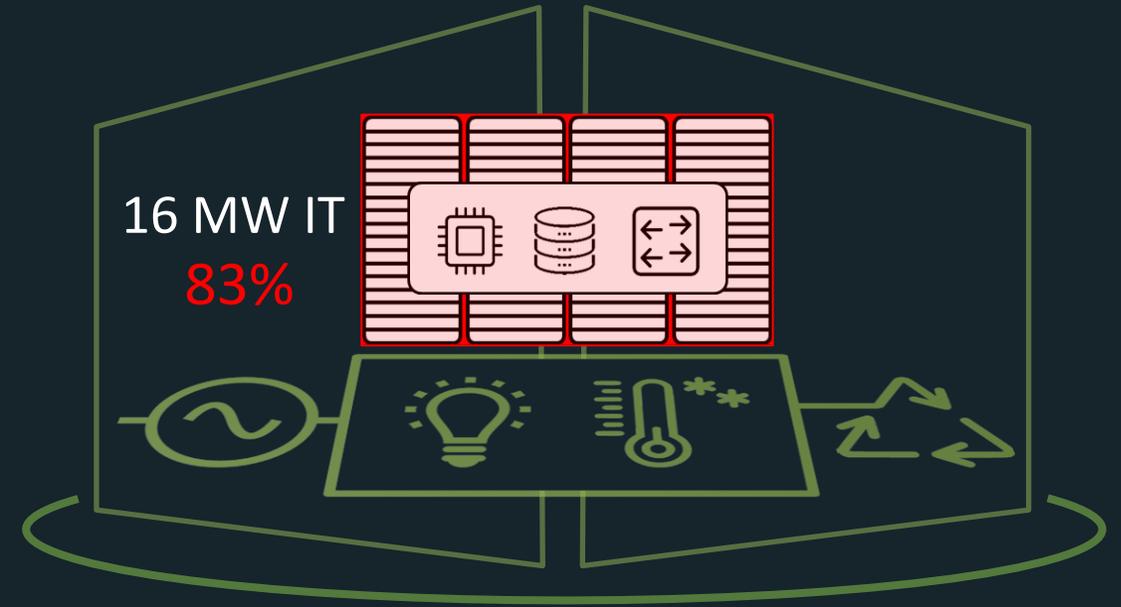

DC electricity goes to IT

2 MW DC in 2010

PUE = 2.0

20 MW DC in 2020

PUE = 1.2

# SDEA Label

certifying DC efficiency/emissions

## Unique

Full-stack (w/ IT) efficiency/emissions

## Timely

Projected datacenter growth & climate impact

## Comprehensive

Captures end-to-end datacenter energy flow

EFFICIENCY  
BRONZE

EFFICIENCY  
SILVER

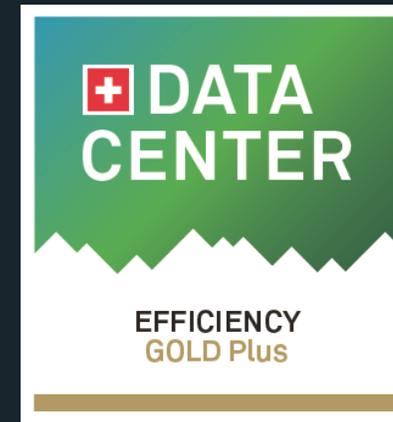

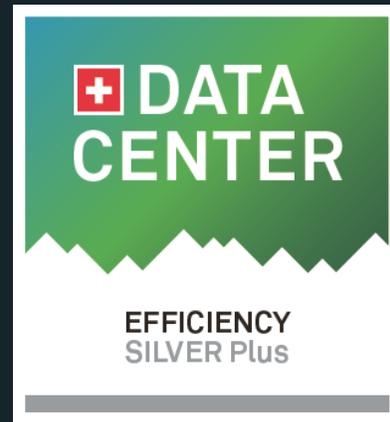

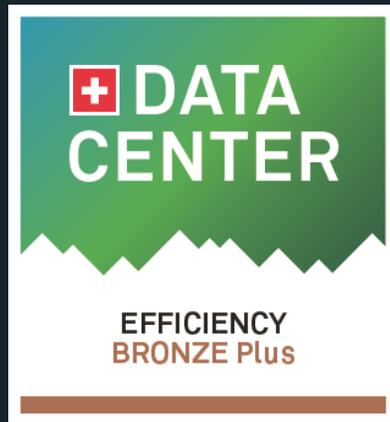

EFFICIENCY  
GOLD

# Premium variants

capture in-flow energy sources

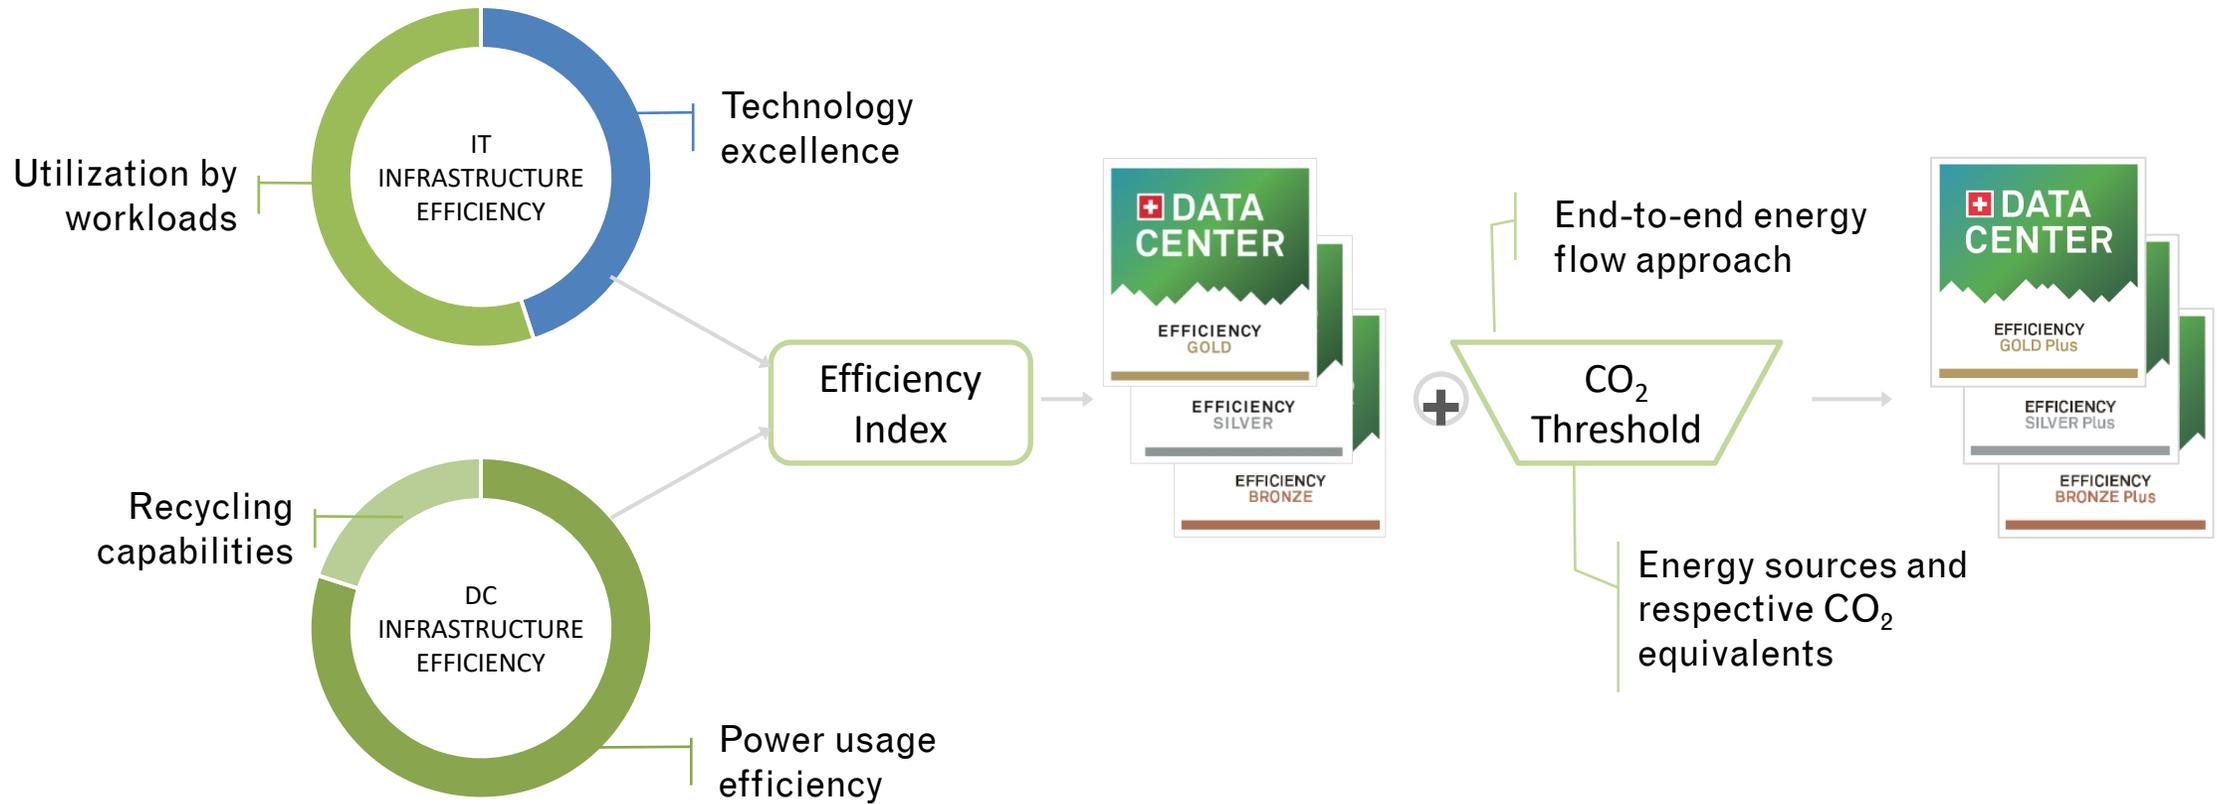

Holistic quantification of emissions to gauge sustainability

# Qualification

one combined efficiency index and eco premium

# International review of energy efficiency in Data Centres for IEA EBC Building Energy Codes Working Group

---

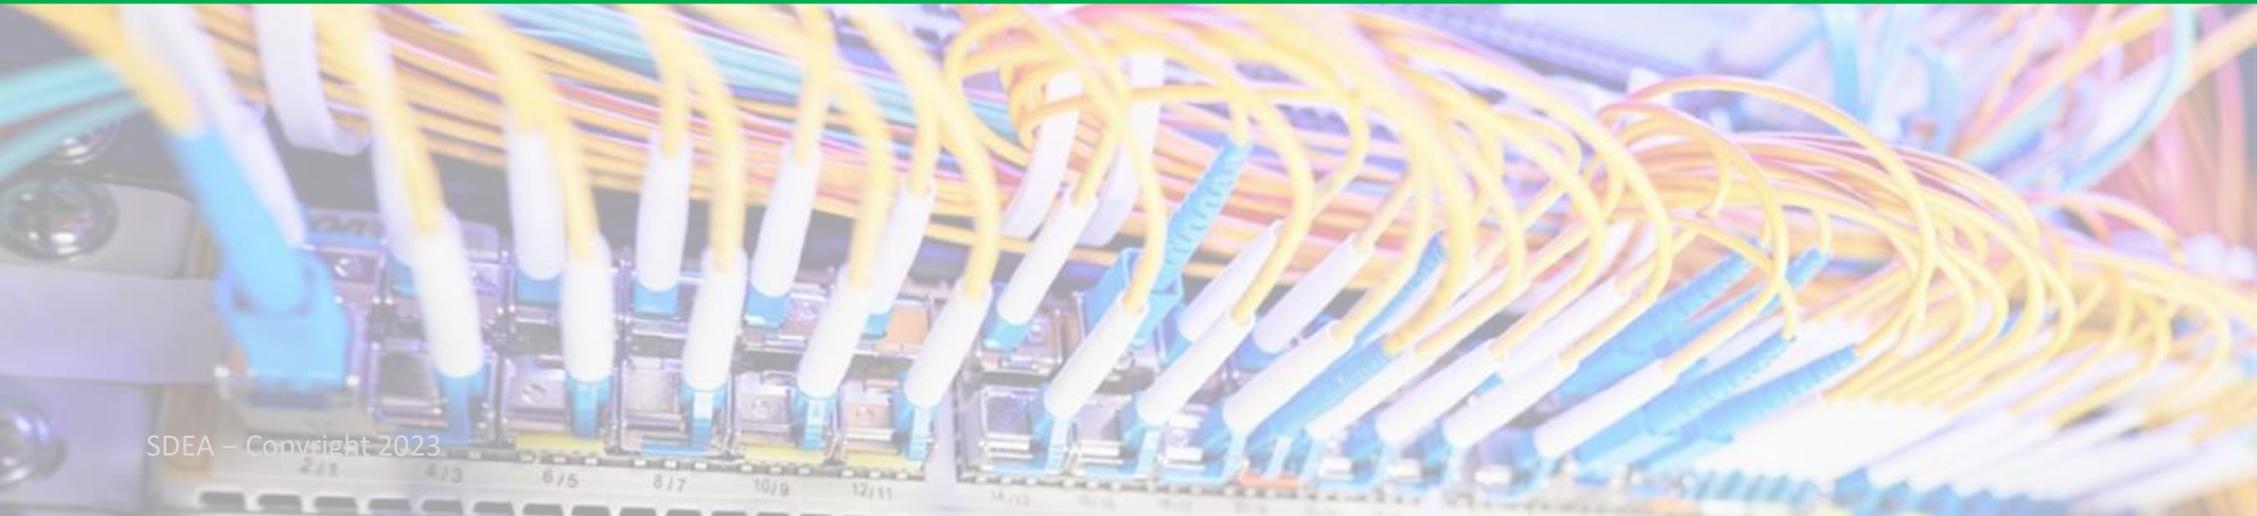

March 2022

International review of energy efficiency  
in Data Centres for IEA EBC Building  
Energy Codes Working Group

---

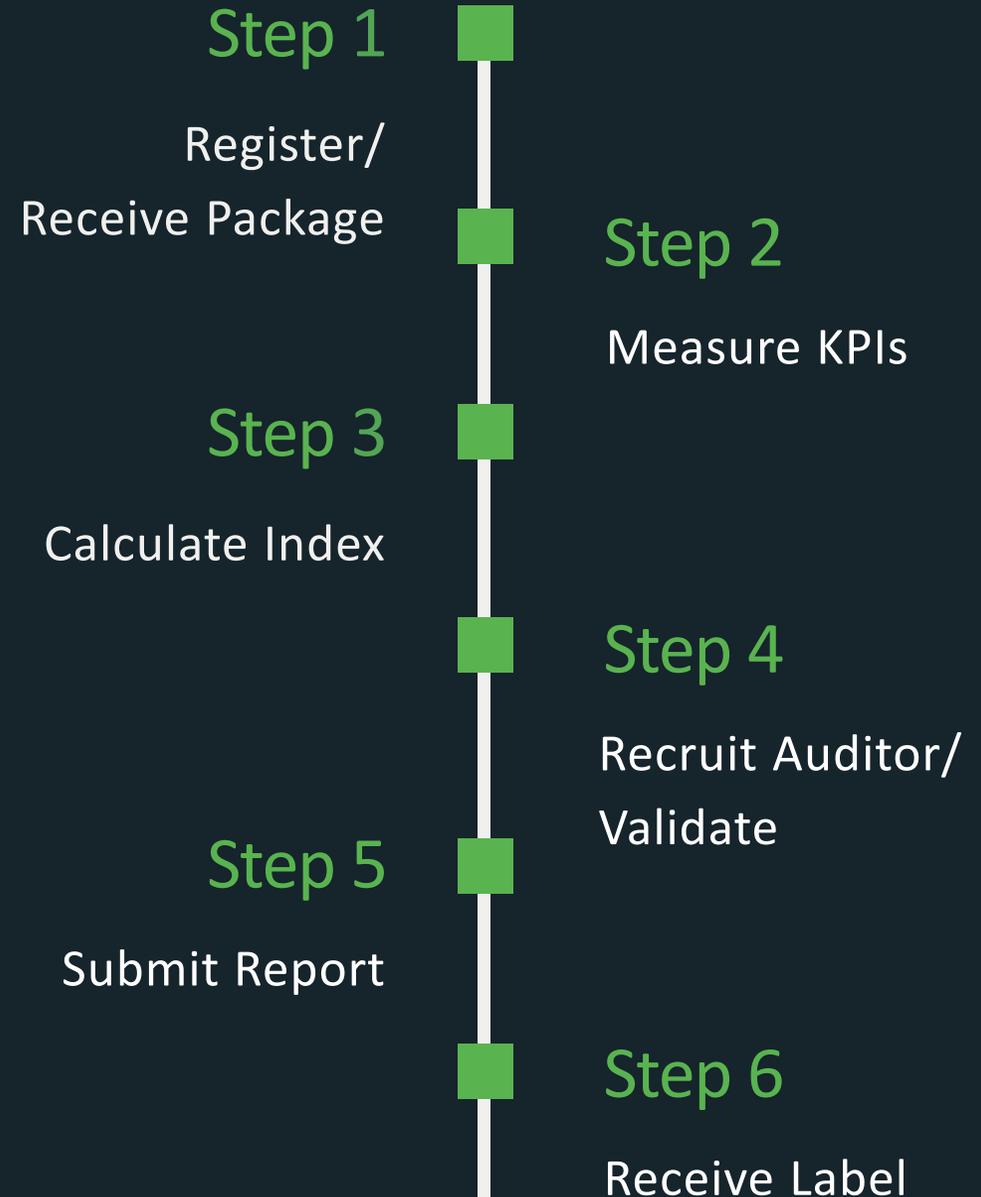

**Finds SDEA Label unique with  
grades for efficiency/emissions**

# Certification process flow

Once the applicant has proven datacenter qualification during an evaluation process mandated by SDEA, the applicant will solicit an auditor's service to validate the measurements and submit an evaluation report. If the criteria for the applied label grade is fulfilled, the label will be granted.

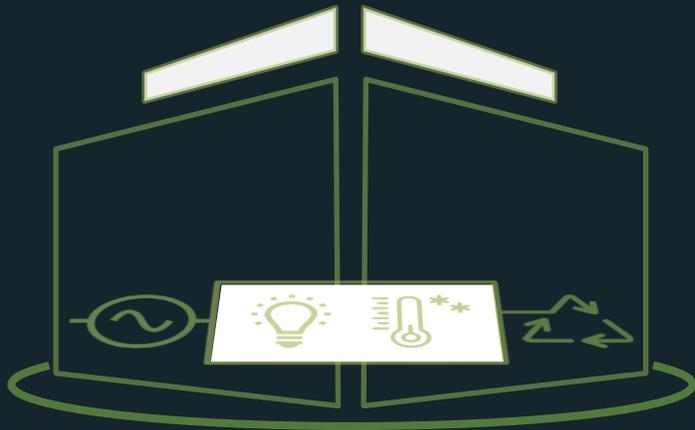

# Modular certification
