

Netzkonvergenz - Das Zeitalter neuer Konnektivitätslösungen

FTTH Forum, Baden, 7. Mai 2019

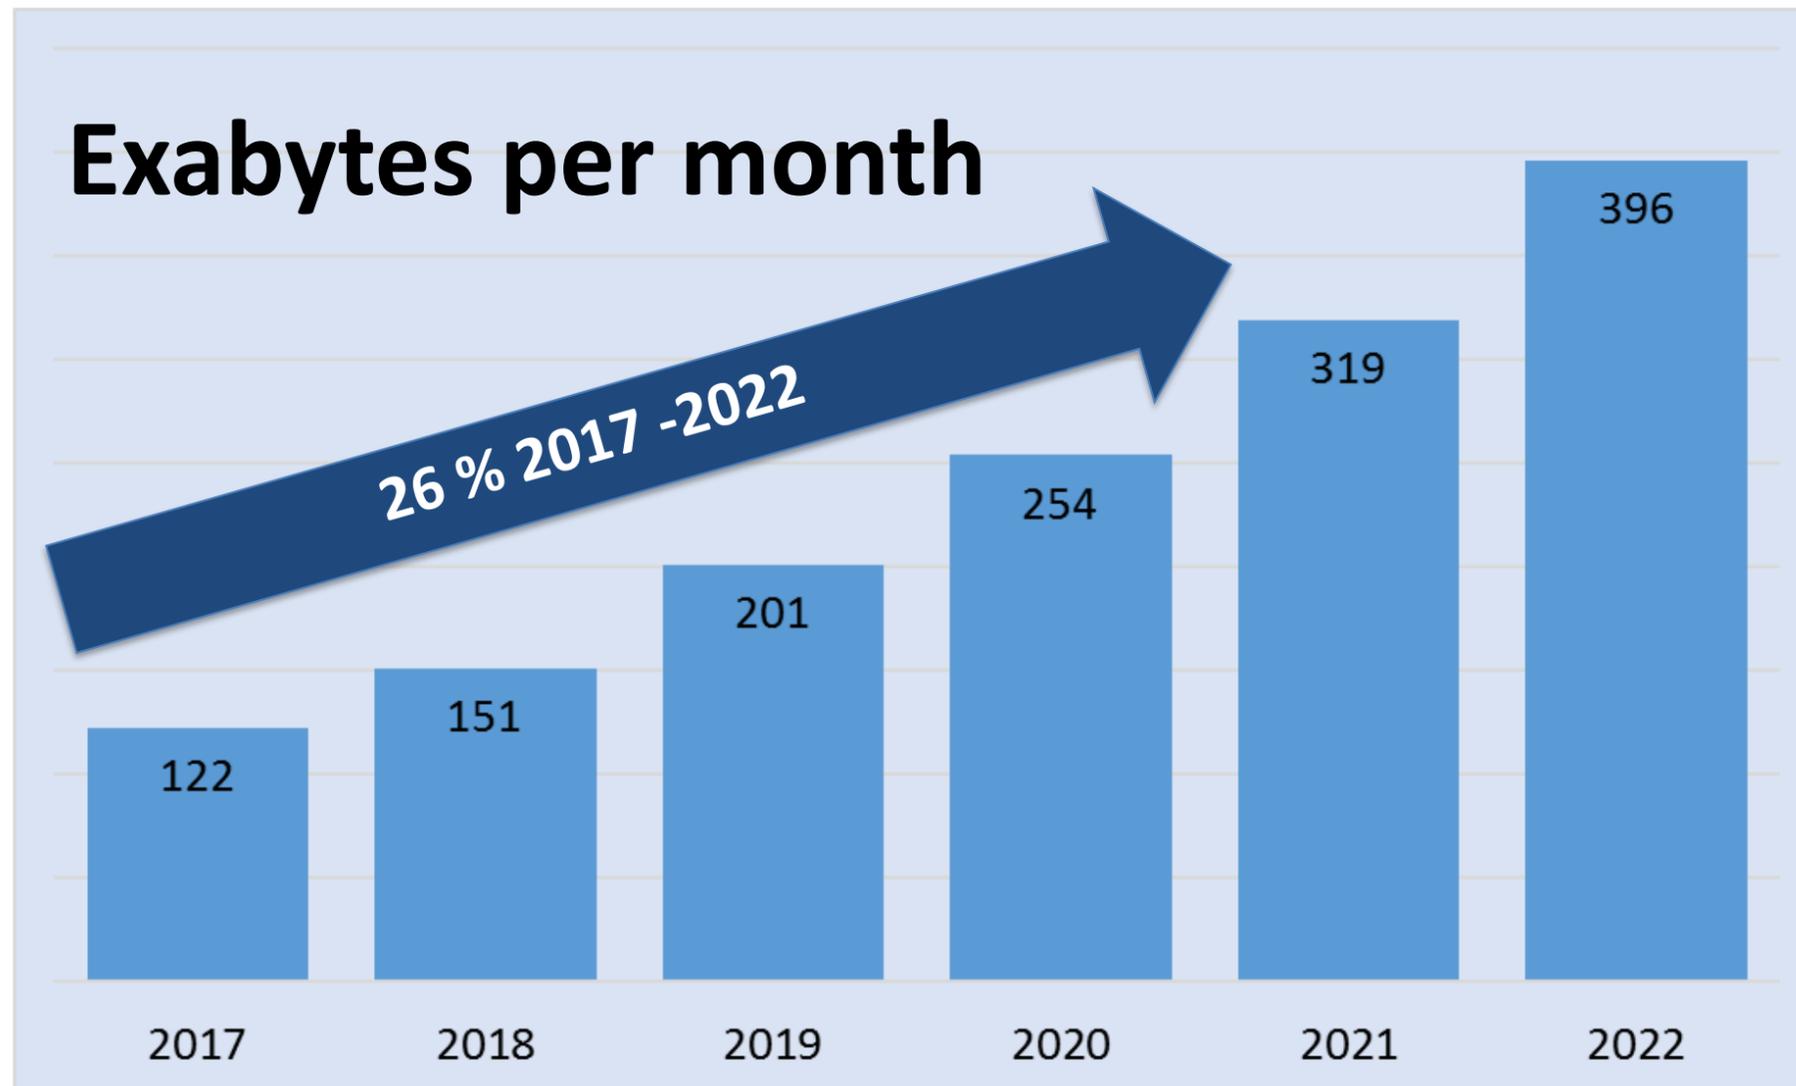

Jan Schindler, Prysmian Group

Telco's Market outlook: data traffic demand is exploding

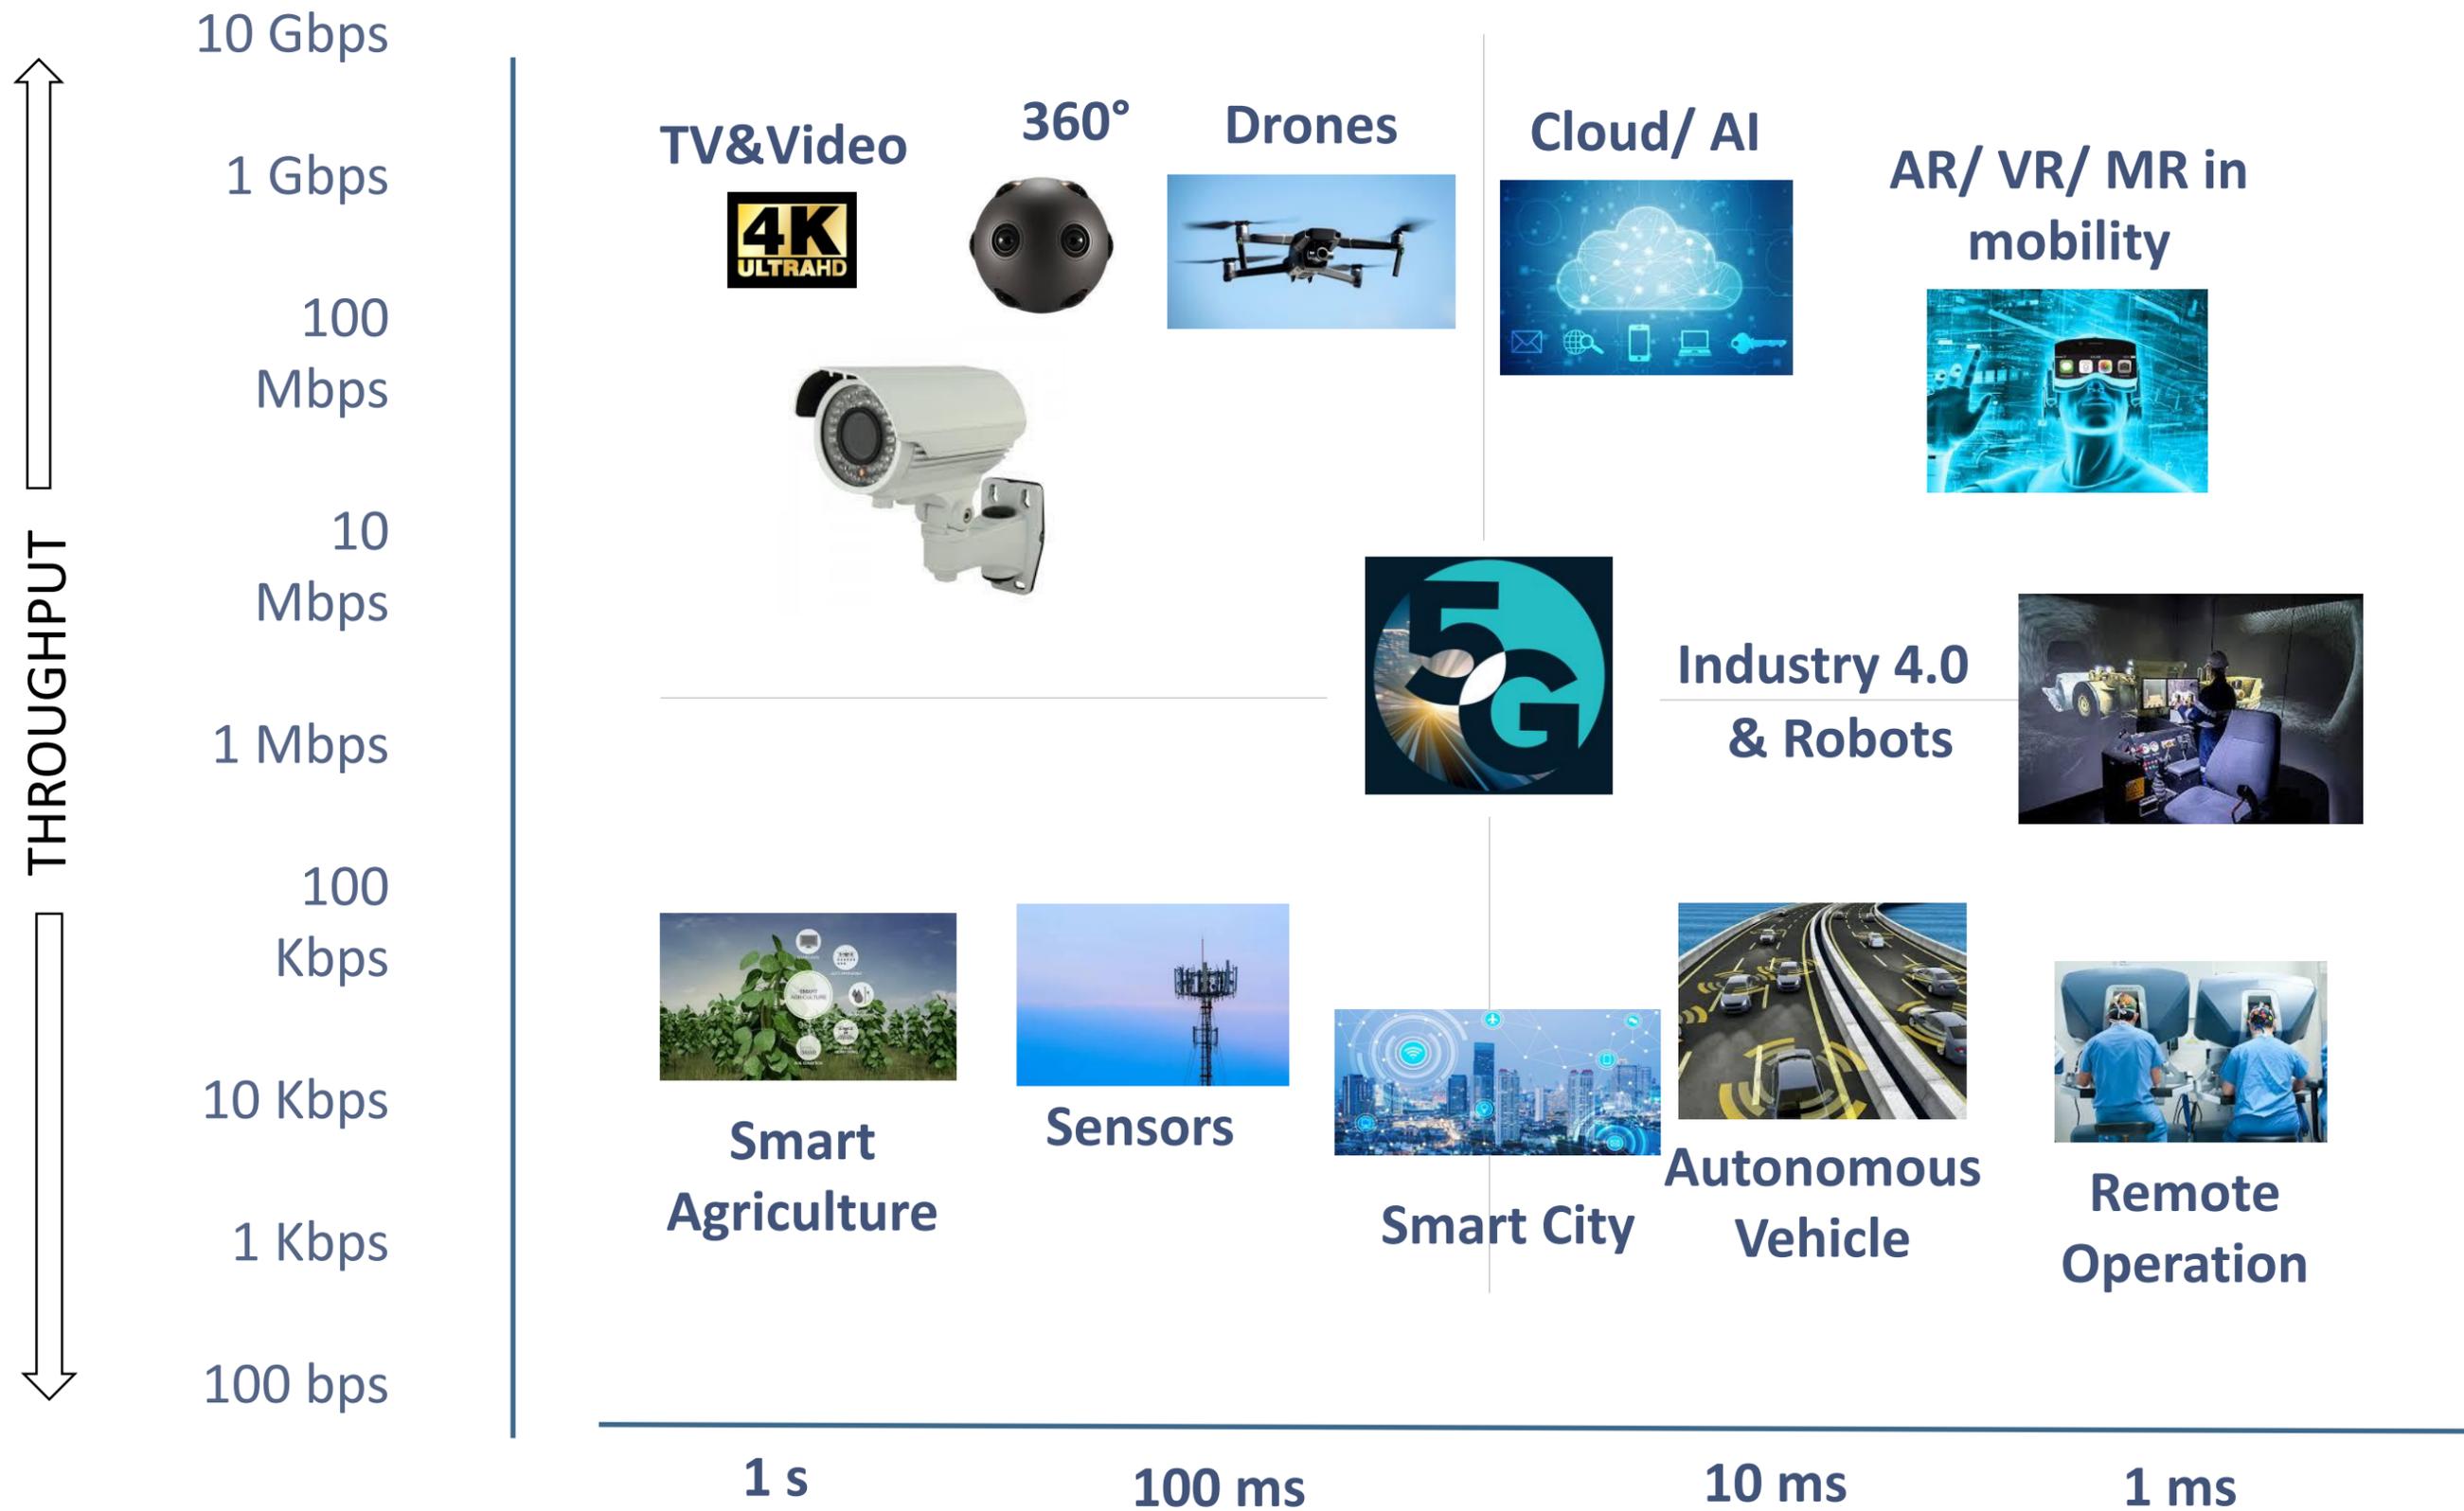

Data Traffic demand will explode in the next decade

- Annual global IP traffic will reach 4.8 ZB per year by 2022 (slight increase in expectations over last year's forecast)
- Global IP traffic will increase nearly threefold over the next 5 years
- Traffic from wireless and mobile devices will account for more than 71 percent of total IP traffic by 2022
- ... and is growing, growing.....

With 5G multi-service network, new service will emerge

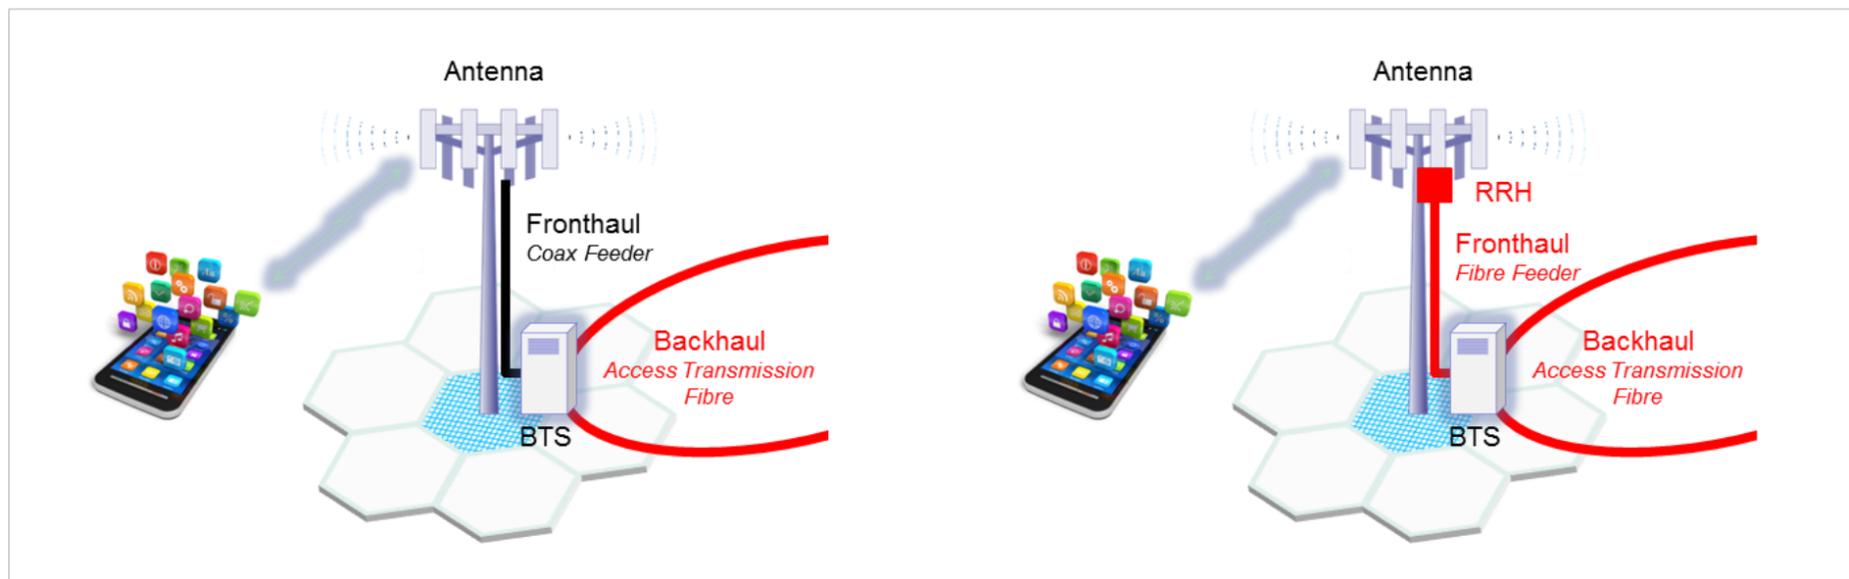

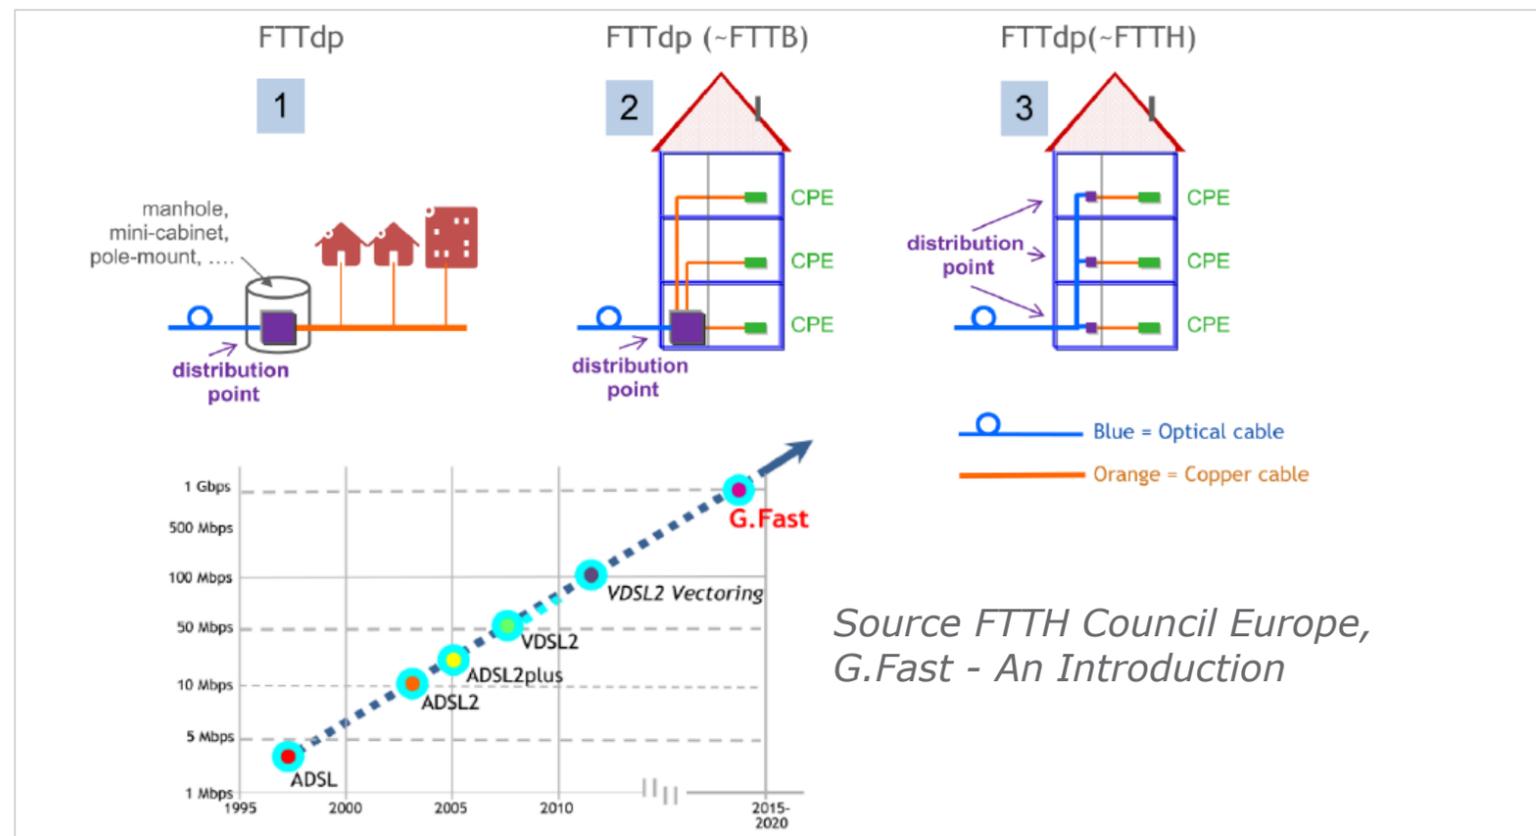

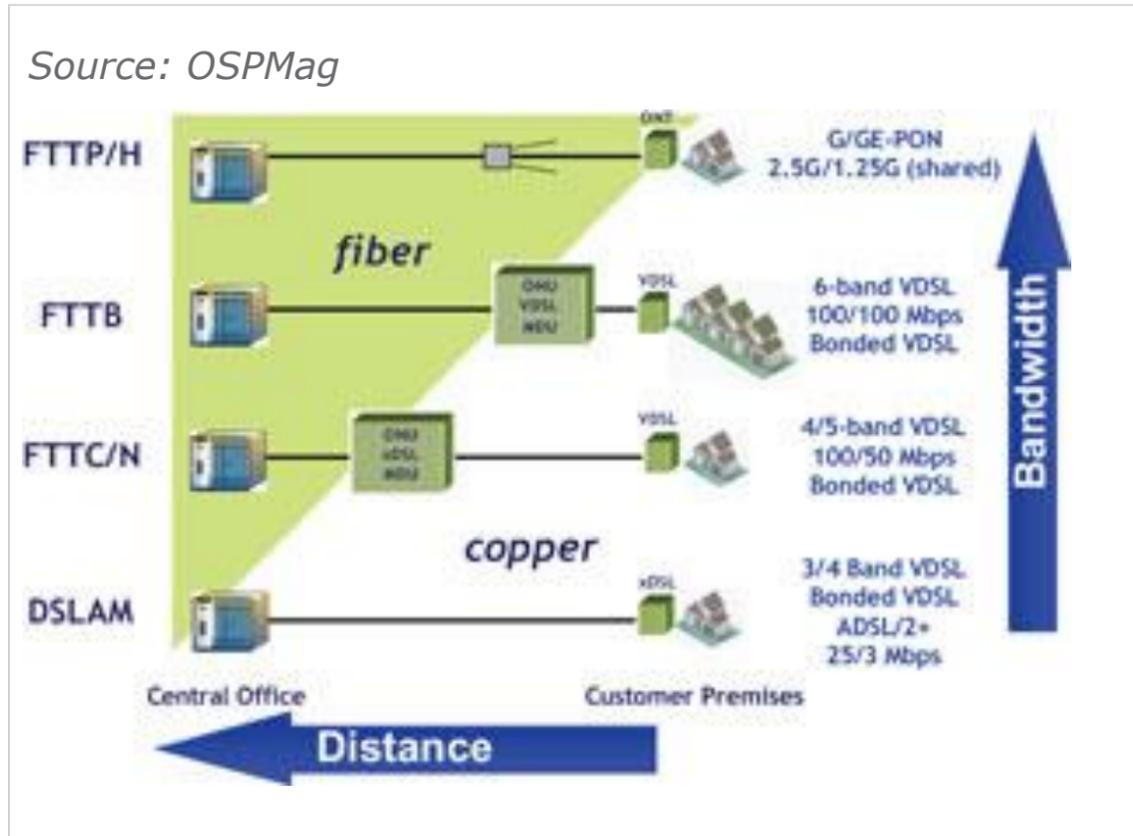

World Fibre Demand Drivers – Now Changing Dimension!

Source: CRU International Sep 2017

Access Era – Fibre As The Common Denominator

- FTTN:** Fibre To The Node/Neighbourhood
- FTTC:** Fibre To The Curb
- FTTS:** Fibre To The Street
- FTTB:** Fibre To The Building/Basement
- FTTCab:** Fibre To The Cabinet
- FTTHdp:** Fibre To The Distribution Point
- FTTH:** Fibre To The Home
- FTTO:** Fibre To The Office
- FTTD:** Fibre To The Desk
- FTTLA:** Fibre To The Last Amplifier
- FTTA:** Fibre To The Antenna

...

... and With IoT's Tens of Billions of Devices On The Network!

27.1 billion in 2021
(Cisco VNI)

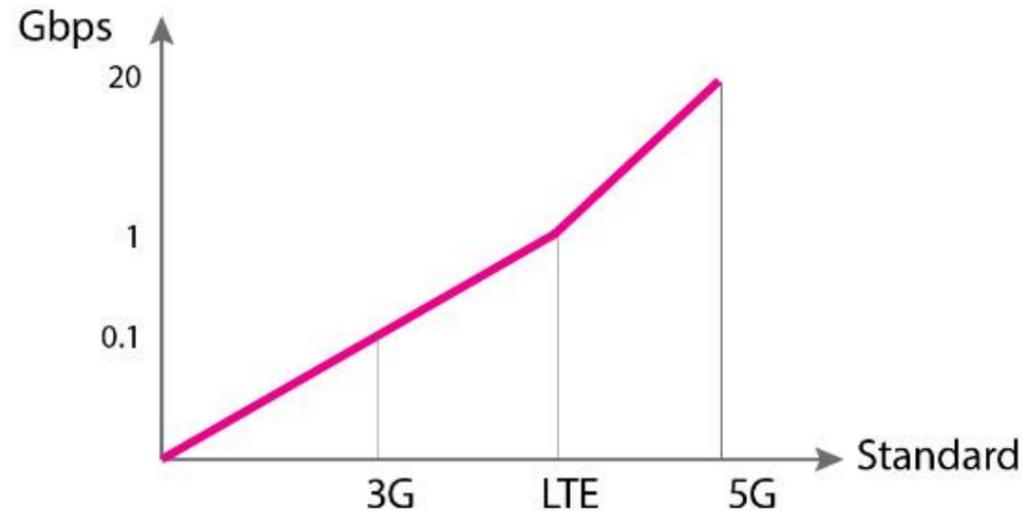

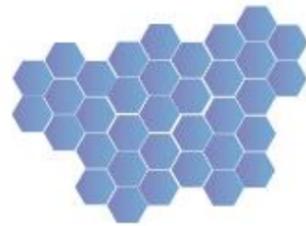

29 billion by 2022
(Ericsson)

20.4 bn by 2020
(Gartner)

30bn by 2020, 80bn by 2025
(IDC)

27 bn 2017 to 125 bn in 2030
(IHS Markit)

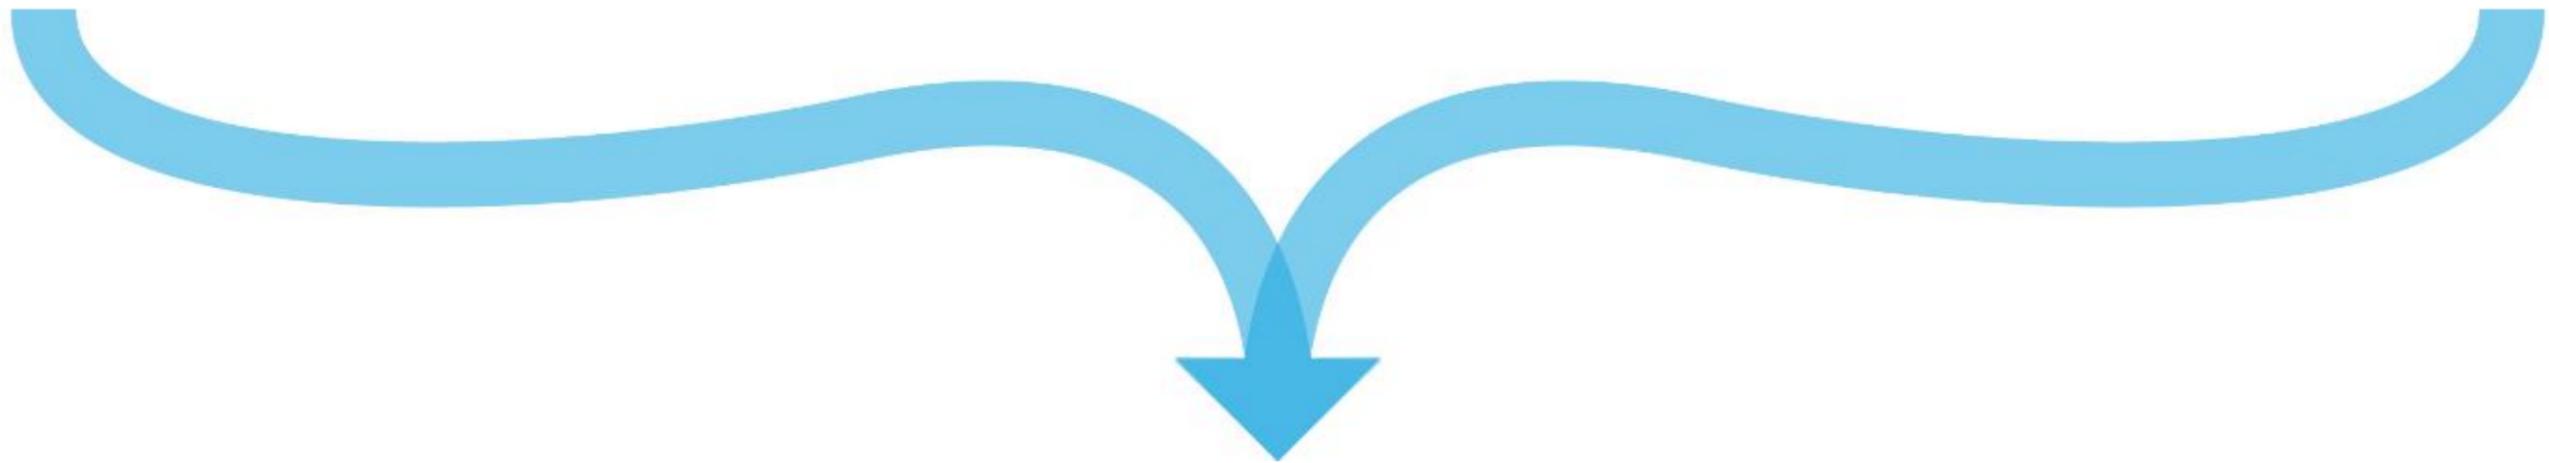

Focus on 5G in The Fibre Ubiquity Era

Densification
Will require more backhaul

Increasing peak rate
Will require high throughput transport

Reliability
Will require a reliable medium

More Fibre to Deploy... but how?

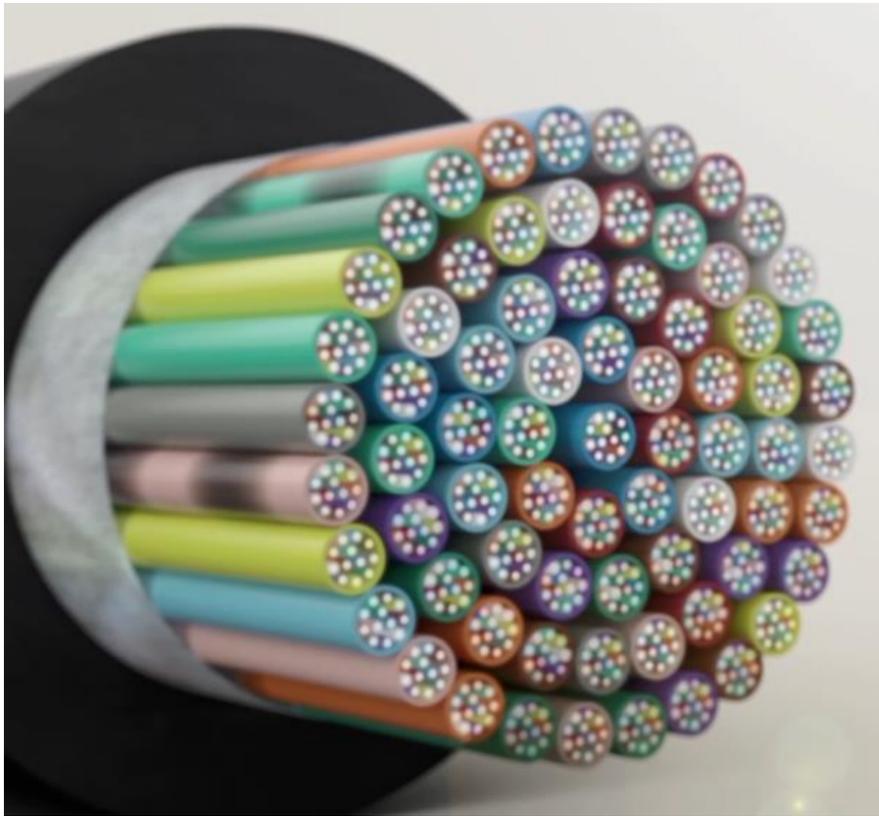

Initiatives To Optimize The Fibre Architecture Builds

e.g. Verizon’s “One Fiber” Approach

- **Multipurpose:** fibre as converged multi-purpose architecture instead of a traditional purpose-built fiber
- **High fibre count:** cost-effective deployments with multiplying strands of fibres in deployed cables
- **Future looking:** dense fibre infrastructure for mobile embracing also enterprise, small business preparing the ubiquity ground for future smart cities

Ubiquity Era – The Fibre Density Indicator

Metrics: # fibres per mm²

- **Massive:** leverage any empty space, any construction work, **packing as many** fibres as possible in cables for future use in the fibre-dense world
- **Smart:** achieve **record compactness** in cables to leverage any Right-of-Way for fibre connections without major construction works costs & disruptions
- **Quick:** **speed-up** deployment time for fast and efficient service provisioning

Bend-Insensitive Resilient Fibres are CRUCIAL to succeed!

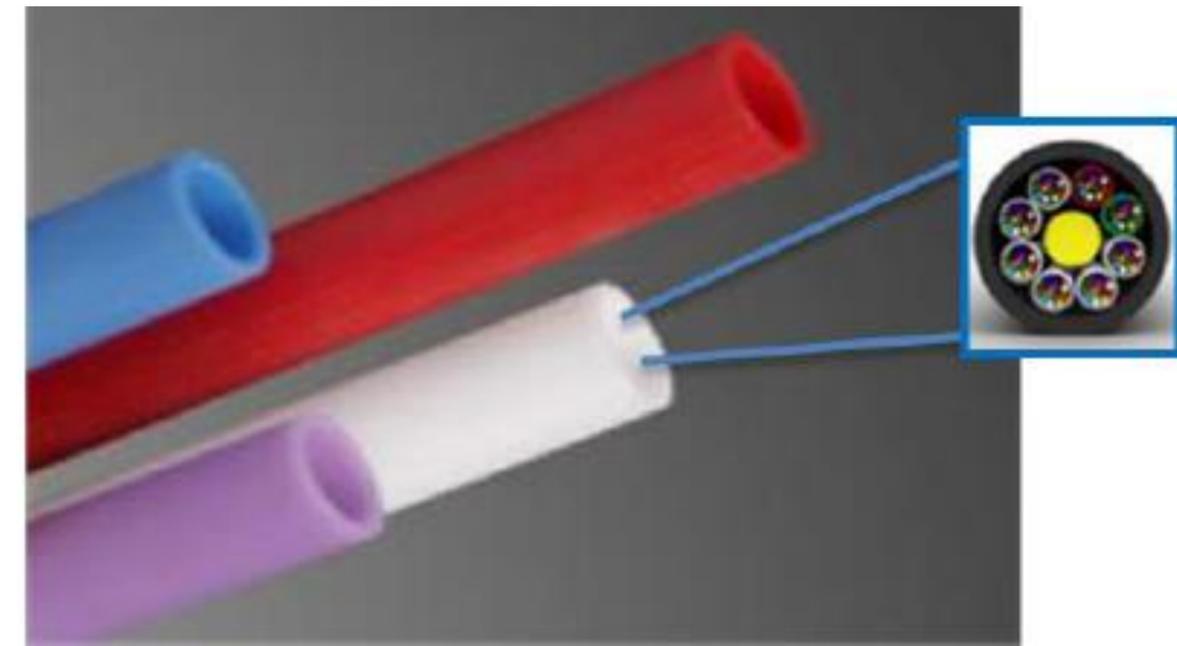

Ubiquity Era – Fibre Density / Some Realizations

Record Fibre Density
5.5 fibres per mm²

Record Fibre Density
8.0 fibres per mm²

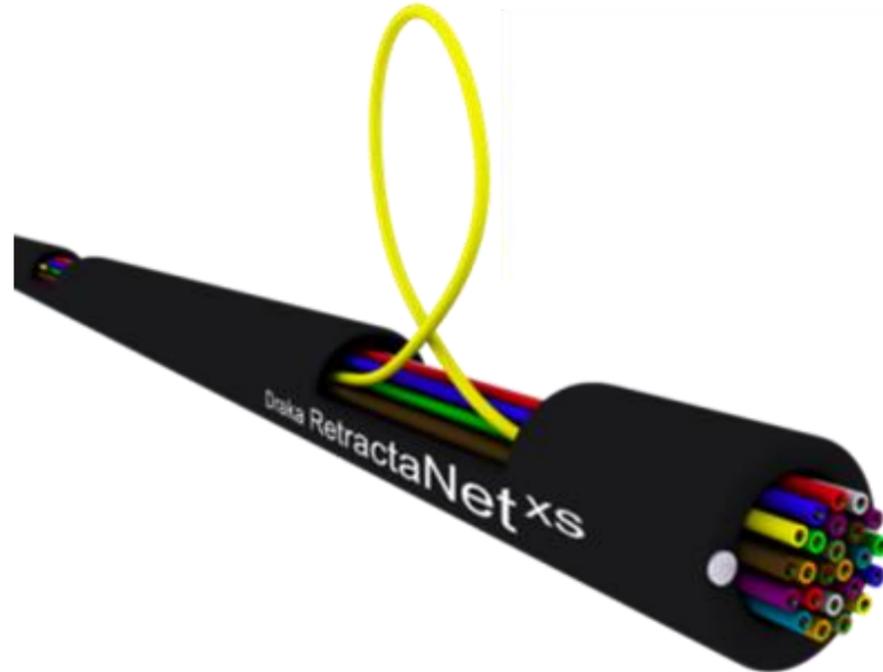

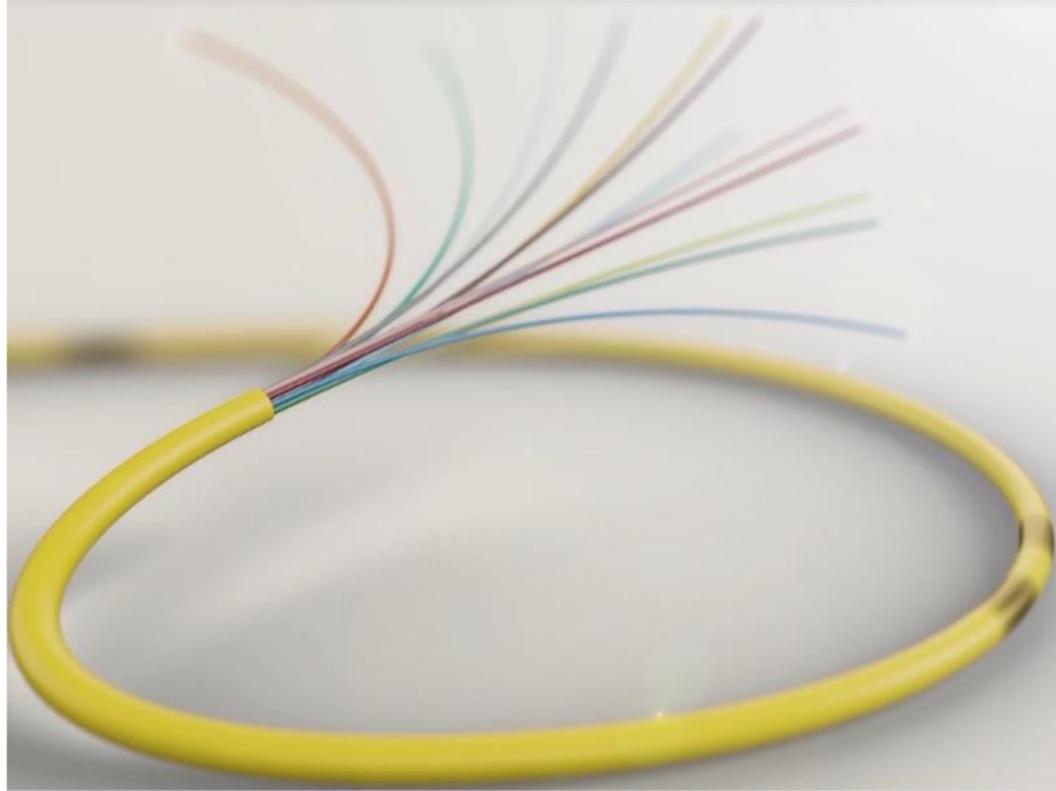

Duct
6912f
40.0mm

Microduct 144f 4.8mm

And more to come!

Ubiquity Era – Flexibility

Jointing, Tapping, Connecting

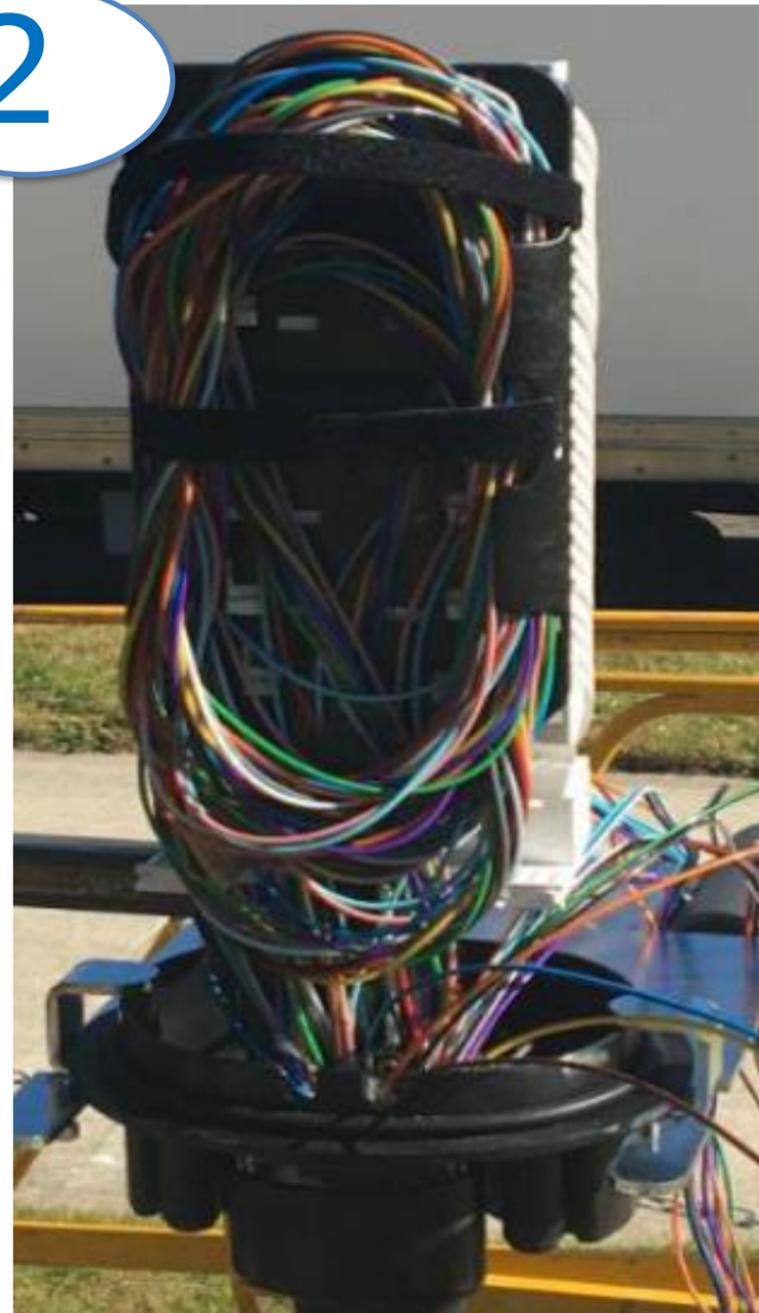

User-friendly and easy to handle cable solutions are **more than ever required** in the ubiquity era

Flexibility for Improved Joint Tube Management

1

2

3,2m of modules stored into the MMJ basket

(1) 24 x 12F FlexTube®

(2) 12 x 12F regular loose tubes

Thank you.
